

# Project - Bank Client-server System

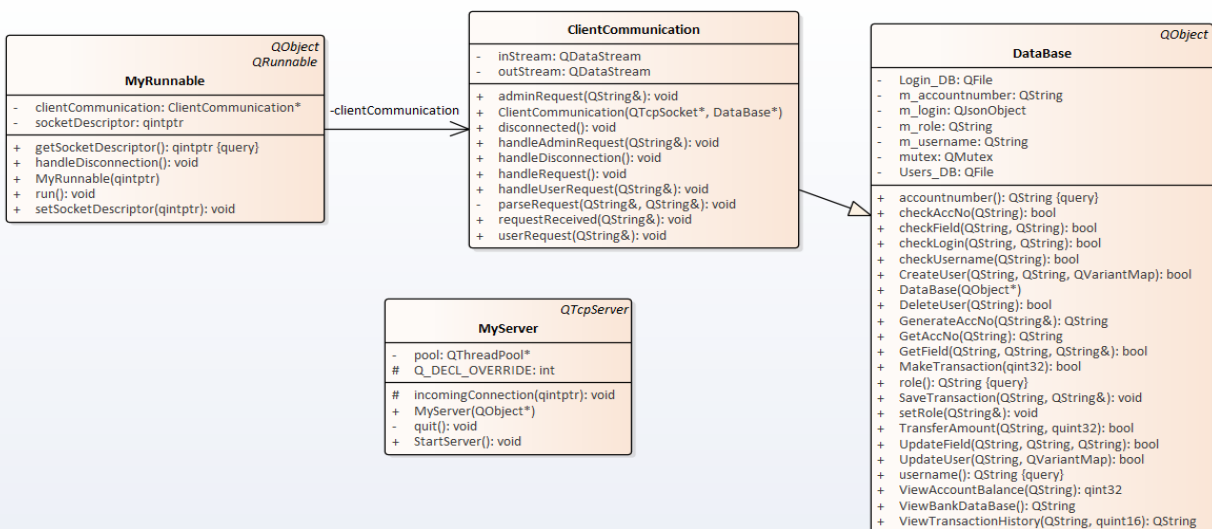

Rana Ali Ibrahim Mohamed

## Client Class Diagram:

➤ Here, the Client class is the abstraction class for users or admins.

## Server Class Diagram:

### **In server console application:**

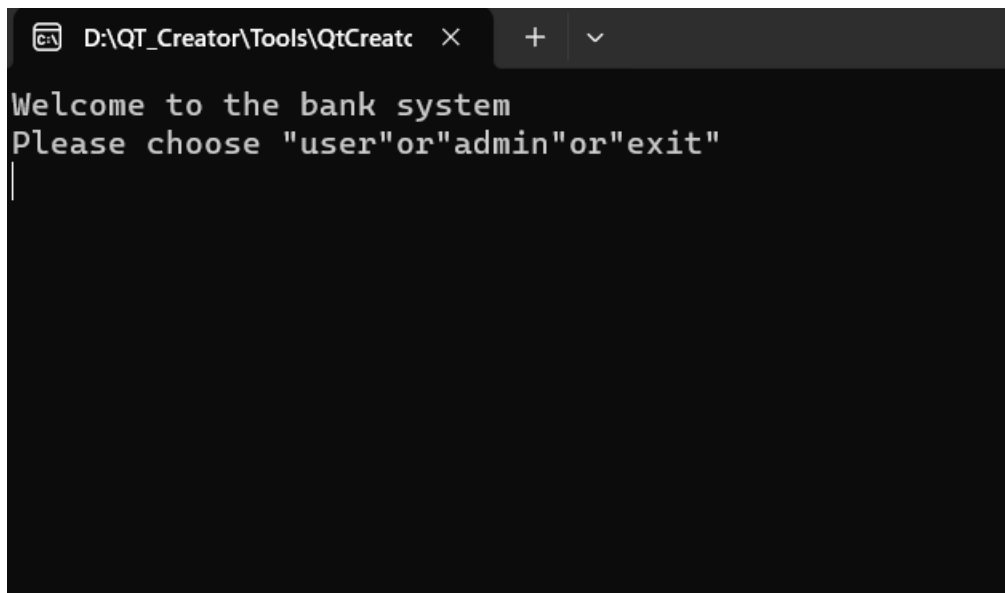

Database class is the class which includes all the functions dealing with the Json files (DB format).

Client communication class is the class which handles each client (user or admin) connection to the server and processes its requests. This class inherits the Database class to access all the functions dealing with database files to handle the client requests.

MyRunnable class is the piece of code that is executed on the thread in the thread pool. Where QRunnable is not a thread it's the task executed on the thread in the thread pool.

MyServer class is the class inherits the QTcpServer class which catch each new connection using the incomingConnection overridden function from QTcpServer class which assigns each new connection to a runnable task in the pool and the executed code is in run function in MyRunnable class which executed once pool starts executing.

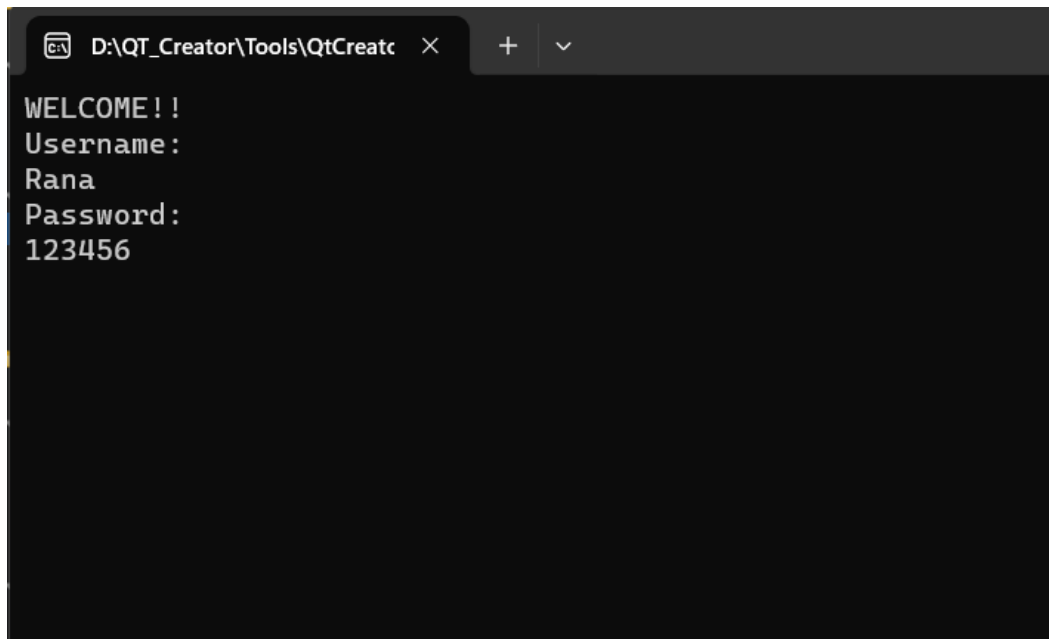

### **UI (User Interface):**

```
D:\QT_Creator\Tools\QtCreatc  X  +  v

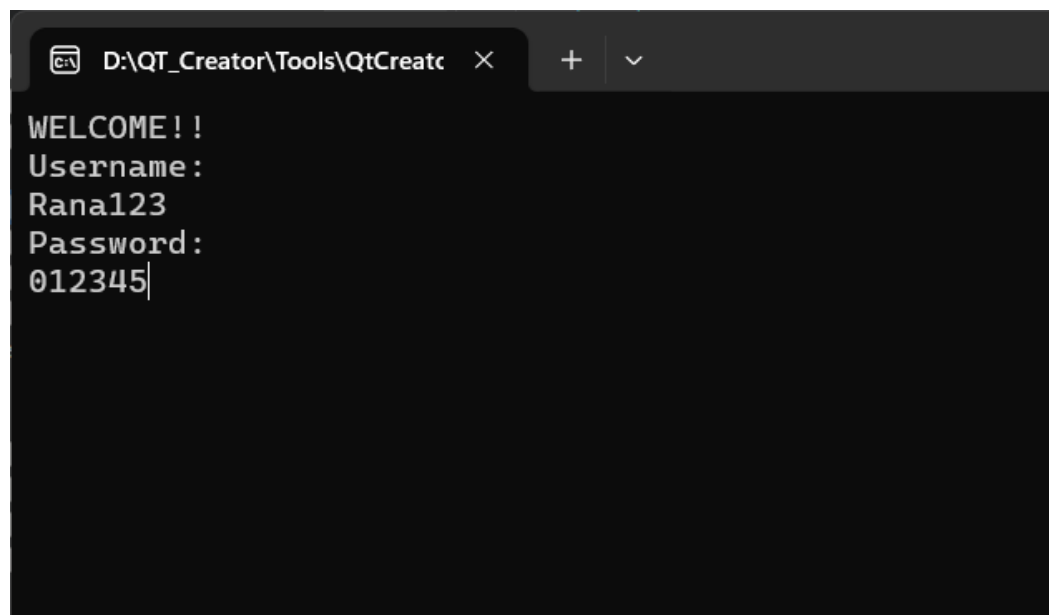

Welcome to the bank system
Please choose "user"or"admin"or"exit"
|
```

➤ **The client chooses if he is admin or user.**

```
D:\QT_Creator\Tools\QtCreatc  X  +  v
WELCOME!!
Username:
Rana
Password:
123456
```

- If client chooses user: Login function starts to be logged.

```
D:\QT_Creator\Tools\QtCreatc  X  +  v
WELCOME!!
Username:
Rana123
Password:
012345|
```

- If client chooses admin: Login function starts to be logged.

Inside Login function we check the existence of username and password in our Login file DB then the client can be logged if they existed.

```
D:\QT_Creator\Tools\QtCreatc  X  +  v

Choose from the list:
1-View Account
2-View Transaction History
3-Get Account Number
4-Transfer Account
5-MakeTransaction
6-exit
```

➤ List for user options.

```
D:\QT_Creator\Tools\QtCreatc  X  +  v

Choose from the list:
1-View Account
2-View Transaction History
3-Get Account Number
4-Create New User
5-Update User Data
6-Delete User
7-View Bank DataBase
8-exit
```

➤ List for admin options.

```
D:\QT_Creator\Tools\QtCreatc  X  +  v

Threads: 5
MyServer(0x75ebffffb70) start QThread(0x23b212b66d0)
Listening
pool started
MyRunnable(0x23b212ba170) run on QThreadPoolThread(0x23b212bb2f0, name = "Thread (pooled)")
connected to 880
Thread ID: 0x7348
pool started
connected to 880
MyRunnable(0x23b212ba730) run on QThreadPoolThread(0x23b212bb2c0, name = "Thread (pooled)")
